PROFESSIONAL SUMMARY

Developer focused on backend and data, with experience in SQL Server, Delphi and Python. I work on property registry and geospatial management systems for municipal governments, with an emphasis on data migration, synchronization and integrity across databases, spreadsheets and legacy tables. Software Engineering student at UNILINS, expected to graduate in December 2026.

PROFESSIONAL EXPERIENCE

Developer — EGATI Engenharia & Negócios
August 2025 – Present

- Development and maintenance of a Geographic Information System (GIS) in Delphi and SQL Server, used for municipal property registry management.
- Creation and execution of routines for migrating and synchronizing registry data — owners, addresses and properties — across SQL Server databases, Excel spreadsheets and legacy tables, with record integrity validation.
- Development of SQL queries and scripts for verifying, correcting and standardizing data in municipal registry databases.
- Conversion and organization of geospatial data, including raster images and map databases, using QGIS/GDAL.
- Source code versioning with Git and work on projects for different municipalities.

IT Support Technician — Lins City Hall (Prefeitura de Lins)
September 2023 – August 2025

- Technical support for the municipality's health units, providing on-site and remote assistance using AnyDesk, TeamViewer, RustDesk and VNC.
- Maintenance of networks, computers and peripherals, as well as system configuration in Windows and Linux environments.

TECHNICAL SKILLS

Languages: Delphi, Python, SQL (T-SQL), JavaScript (Node.js), HTML/CSS
Databases: Microsoft SQL Server, PostgreSQL
Tools & Technologies: Git, Express, APIs REST, QGIS/GDAL
Environments: Windows, Linux, networking

PROJECTS

Reprogrammed — educational web game for learning programming logic (capstone project, team of two)
REST API in Node.js and Express, with JWT authentication (Supabase Auth) and a PostgreSQL database. JavaScript client built with Phaser and Vite; continuous deployment of the front end on Vercel and the API on Render on every push to main.
